

UDAY KIRAN AKULA

Senior Frontend Developer | React.js, Next.js, TypeScript & React Native | 6+ Years

+91 8106454161 | udaykiran199715@gmail.com | Hyderabad, India

SUMMARY

Senior Frontend Developer with 6+ years building production web applications using React.js, Next.js, TypeScript, and JavaScript (ES6+), with complementary React Native mobile and Node.js experience. Experienced in data-heavy dashboards, virtualized data grids, Gantt charts, real-time charts, dynamic forms and workflows, and reusable component libraries, with a focus on performance optimization, Core Web Vitals, and SEO. Works with Redux Toolkit, Zustand, React Query, Tailwind CSS, and Material UI across solar energy, logistics, CRM, community management, insurance, and e-commerce products.

TECHNICAL HIGHLIGHTS

- Built virtualized data grids (react-window) handling 100,000+ records and an interactive Gantt chart with task dependencies for a solar project management platform
- Built a Next.js e-commerce storefront using SSR, SSG, and ISR with Core Web Vitals and SEO optimization
- Built the chat UI frontend of an internal LLM/RAG document platform, and reusable component libraries with TypeScript, theming, i18n, and RBAC
- Built React Native apps with signature capture, document scanning, and on-device PDF generation, released to the App Store and Google Play using Expo EAS Build, Xcode, and Android Studio

PROFESSIONAL EXPERIENCE

Senior Software Developer

Aug 2023 – Present

Omnics Technologies Pvt Ltd — Hyderabad, India

- **Solar Energy Platform:** Built a solar energy project management platform in React.js and TypeScript with a project, phase, task, and subtask workflow, AND/OR task dependencies, and completion checks on mandatory fields across nearly 300 configurable location fields
- Implemented virtualized data grids with react-window to display 100,000+ records across thousands of locations, and an interactive Gantt chart with dependency arrows and status colors (to-do, in progress, overdue, completed)
- Built real-time data visualization dashboards with ApexCharts refreshed every minute (solar generation, consumer distribution, grid import/export), KPI reports with Excel export, and a partner contracts module for one-time and recurring contracts
- **Logistics & Rental Platform:** Built a logistics and rental management web platform covering item movements between projects and warehouses, tours, and the sales flow from offer to order to invoice, with configurable PDF generation layouts for each document
- Implemented rental invoice calculations (daily, weekly, monthly, yearly billing, excluded dates, weekend rules) and a Google Maps API area planner using Turf.js that estimates item counts from a drawn polygon
- **CRM Platform:** Built a CRM platform with configurable pipelines, phases, steps, and fields, where deals move between phases only after mandatory fields are validated, along with drag-and-drop boards, a Craft.js email template editor, and a React Native (Expo) project management app
- **LLM / RAG Platform:** Built the frontend of an internal LLM/RAG document platform with a chat UI that renders code, tables, and conversational responses
- **Frontend Architecture:** Built reusable component libraries and delivered all web and mobile products in TypeScript with internationalization (i18n), theming, role-based access control (RBAC), and a focus on performance optimization
- Implemented secure OAuth login with token refresh using Expo Secure Store, and used React Query (TanStack Query) for server-state caching to cut redundant API calls
- **Mobile:** Built a React Native driver app for the logistics platform with a step-by-step tour flow (vehicle check, loading, unloading), camera capture, document scanning, signature capture, and on-device PDF generation with download and share
- Built a community management app for iOS and Android covering attendance, gate approvals, dues, amenities, and staff management, with Razorpay payments, PDF receipts, push notifications, and QR-code workflows, shipped to the App Store and Google Play with OTA updates (expo-updates) for releasing fixes without a store resubmission

- Structured mobile codebases using Atomic Design (atoms, molecules, organisms) and a repository pattern for the API layer, so backend changes plug in without touching screens

Engineer — Application Management

Oct 2021 – Jul 2023

Azentio Software Pvt Ltd — Bengaluru, India

- Built frontend and backend features for an insurance customer portal where users view their policies, buy new policies, and raise claims, using React.js, Redux, Node.js, Express.js, and Sequelize
- Built multi-step policy and claim forms with questionnaires, rider selection, bank details, and document uploads, plus draft saving and status tracking (draft, submitted, in progress, approved, rejected)
- Built Node.js and Express.js APIs that store customer requests and pass them to the client's insurance systems, with cron jobs that sync claim and policy status updates back to the portal
- Built a React Native app (native login with WebView) and handled App Store and Play Store releases; managed Jenkins and GitLab CI/CD builds across SIT, UAT, Pre-Prod, and Prod
- Ran weekly client calls, prepared minutes of meetings, wrote technical documents for change requests, and resolved CRs and bugs tracked in Jira

Software Developer

Sep 2020 – Oct 2021

SUGAR Cosmetics — Mumbai, India

- Built the e-commerce website frontend end-to-end in Next.js and React.js — homepage, collections, product pages, cart, checkout, and payment — with fully responsive design
- Improved page performance and SEO using server-side rendering (SSR), static site generation (SSG), and incremental static regeneration (ISR) along with Core Web Vitals optimization
- Built a CMS dashboard to manage homepage banners, product content, and images, including multiple homepage layouts, with image handling through AWS Lambda and CloudFront
- Built an influencer earnings dashboard, frontend and backend (Node.js, AWS Lambda, MySQL), showing orders placed per promo code and each influencer's earnings for the marketing team

TECHNICAL SKILLS

Frontend: React.js (ReactJS), Next.js (NextJS: SSR, SSG, ISR), TypeScript, JavaScript (ES6+), HTML5, CSS3, React Hooks, Context API, Responsive Design

Styling & UI: Tailwind CSS, Material UI (MUI), shadcn/ui, Bootstrap, Reusable Component Libraries, Theming

State Management & Data Fetching: Redux, Redux Toolkit (RTK), Zustand, React Query (TanStack Query), Server-State Caching

Forms, Data Visualization & UI Libraries: Formik, Yup, Zod, react-window (Virtualization), ApexCharts, Gantt Charts, react-dnd, Craft.js, Google Maps API, Turf.js, PDF Generation

Performance & Architecture: Performance Optimization, Virtualization, Core Web Vitals, SEO, Atomic Design, Repository Pattern, Feature-Based Folder Structure

Testing & Quality: React Testing Library, Unit / Integration / End-to-End Testing, Code Reviews, Quality Assurance

AI: LLM / RAG Application Frontend, Chat UI, AI-Assisted Development (Claude Code, GitHub Copilot)

Mobile: React Native (CLI & Expo), Expo Router, EAS Build, NativeWind, Native Modules, Camera, Document Scanner, Signature Capture, Push Notifications (Firebase Cloud Messaging), Expo Secure Store, OTA Updates (expo-updates), WebView, Xcode, Android Studio, App Store & Google Play Releases

Backend & Databases: Node.js, Express.js, REST APIs, Sequelize ORM, Cron Jobs, Third-Party API Integration, MySQL, PostgreSQL, MongoDB

Cloud & DevOps: AWS (Lambda, S3, CloudFront), Firebase, Jenkins, GitLab CI/CD, Git

Practices: Internationalization (i18n), Role-Based Access Control (RBAC), Agile/Scrum, Jira, Postman, Technical Documentation, Client Communication

EDUCATION & ACHIEVEMENTS

Bachelor of Technology (B.Tech), 2014 – 2018

Full Stack Web Development Program — Masai School, 2020 (3rd position, Masai Hackathon)

Languages: English, Telugu, Hindi
