

Uday Kiran Akula

Senior Software Developer — React | React Native | Node.js

Hyderabad, India • +91 8106454161 • udaykiran199715@gmail.com • github.com/udaykiran199715 • udaykiran199715.github.io

Senior Software Developer with 6 years of experience architecting and shipping web and mobile products across project management, logistics, community management, insurance, and e-commerce domains. Deep expertise in React.js, Next.js, React Native, and Node.js, with a track record of owning features end-to-end — from data-modeling and API design to performance-tuned UI and app-store release. Known for turning ambiguous requirements into scalable component architectures, mentoring junior engineers, and driving measurable performance and reliability gains in production systems used by thousands of end users.

TECHNICAL SKILLS

Frontend	React.js	Next.js	TypeScript	JavaScript (ES6+)	Redux / Redux Toolkit	Zustand	Context API
	React Query / TanStack Query	TailwindCSS	NativeWind	Material UI	Bootstrap		
Mobile	React Native	Expo	Expo Router	Native Modules	Firebase Cloud Messaging	Secure Storage	
	EAS Build (App Store & Play Store)						
Backend	Node.js	Express.js	REST APIs	WebSockets	Prisma	Serverless Architecture	
Databases	PostgreSQL	MongoDB	Redis	SQL			
Cloud / DevOps	AWS (S3, EC2, Lambda, CloudFront)	Firebase	Jenkins	GitHub Actions	CI/CD Pipelines		
Quality & Tooling	React Testing Library	Postman	Git/GitHub	Jira	Performance Optimization	i18n/l10n	RBAC

PROFESSIONAL EXPERIENCE

Senior Software Developer — Omnics Technologies Pvt Ltd

Aug 2023 – Present

BK Sales Platform (Web + Mobile)

Sales/field operations platform for BitKollegen, spanning a React web console and an Expo/React Native mobile app.

- Architected the web console's state layer by pairing Redux Toolkit with Zustand and React Query, cutting redundant API calls and eliminating a class of state-state bugs across 10+ interconnected modules (tasks, scheduling, documents).
- Built a drag-and-drop task/scheduling board (`react-dnd` , `react-beautiful-dnd`) with an integrated PDF viewer and multilingual UI (`react-intl`), enabling the product to launch simultaneously in multiple locales without follow-up rework.
- Standardized environment-driven configuration (Vite env vars) across local, staging, and production builds, eliminating environment-specific bugs before release.
- Led the mobile app's foundation as a repository-pattern data layer (`services/repositories/http` vs `mock`) so screens are decoupled from API state — new backend contracts plug in via a single flag with zero screen-level changes.
- Implemented secure, persistent authentication (OAuth password + refresh-token grant against a REST API) using Expo Secure Store for tokens and AsyncStorage for profile data, keeping users logged in across app restarts.

CommCorner — Community/Society Management App

Native iOS/Android app (Expo Router, TypeScript, NativeWind) covering attendance, gate approvals, dues, amenities, staff management, and facility reporting.

- Owned 15+ feature modules end-to-end (attendance, gate-approvals, dues, amenities, staff-settings, access-requests, facility-reports, events, notifications), structured as isolated `features/` domains to keep the codebase mergeable across a multi-developer team.
- Integrated PhonePe payment gateway for society dues collection and built PDF generation/viewing for receipts and reports, removing a manual, spreadsheet-based billing process.
- Implemented push notifications end-to-end using Firebase Cloud Messaging and Notifee, and added document scanning and QR-code workflows for gate/visitor approvals.
- Took the app through Play Store and App Store release readiness — EAS Build/Submit pipelines, config-plugin-based native builds, and a documented release runbook adopted by the team for future releases.

CLIMOVA — Enterprise Project Management Platform

- Built a high-performance Gantt chart system to visualize tasks, timelines, and contract durations across concurrent projects.
- Virtualized large-scale data grids with React Window, keeping scroll and render performant while handling datasets of 100,000+ records that previously caused UI freezes.
- Designed role-based dynamic dashboards that reconfigure views and permissions per user role, and integrated real-time solar energy monitoring dashboards (Apex Charts) with multilingual support.

LOGIT — Logistics Management Solution (Web + React Native)

- Built a geo-spatial tool (Google Earth/Maps) letting users draw custom polygons and auto-calculate item capacity per region, replacing manual area estimation.
- Designed a flexible invoicing engine supporting daily/monthly/yearly billing cycles with configurable branding, and a PDF pipeline supporting custom fonts, images, and fixed headers/footers.

- Shipped a companion React Native app with real-time Firebase chat between drivers, operators, and management, plus offline-friendly field workflows.

AI Chatbot Interface

- Designed a chat UI supporting code, table, and conversational response formats, with an optimized storage/retrieval layer for fast conversation history search — modeled on leading chat product UX patterns.

Software Engineer — Azentio Software Pvt Ltd

Oct 2021 – Jul 2023

FWD Insurance Portal

- Extended a production insurance portal to support claims, policy management, fund switching, and beneficiary updates, resolving critical CRs that were blocking customer-facing releases.
- Streamlined multiple customer request workflows, reducing portal friction and improving reliability, while coordinating weekly delivery reporting with stakeholders.

Software Developer — SUGAR Cosmetics

Sep 2020 – Oct 2021

E-Commerce Platform

- Built the storefront (login, cart, wishlist, checkout) as a mobile-first, SEO-optimized React application, collaborating with backend engineers on API and checkout-flow integration.

Influencer Earnings Dashboard

- Built a real-time dashboard tracking blogger earnings and promotional performance, with search, filtering, and pagination for high-volume order data.
- Automated commission payout calculation from promo codes and order tracking, replacing a manual reconciliation process for the marketing team.

EDUCATION

B.Tech, JNTUK

2014 – 2018

ACHIEVEMENTS

Secured 3rd position, Masai Hackathon.

Recognized by product management and engineering leadership for consistent on-time, high-quality delivery across multiple production releases.
